Career Objective

Strategic Software Engineering Leader with 20 years of experience building and scaling high-performing distributed systems. Expert at aligning technical roadmaps with business objectives and driving engineering excellence through Lean/Agile methodologies. Committed to continuous learning and staying abreast of emerging technologies to enhance team capabilities and deliver cutting-edge products.

Professional Summary

- Total 20 years of experience in Software Engineering
- Director - Backend Developer at Julius Baer contributing to develop data platform as a part of markets-as-service initiative.
- Hands on Engineering Manager responsible for building solutions for Banking-As-A-Service(BAAS) platform of Standard Chartered Bank which included payments, debit cards and digital Customer onboarding.
- Designed and implemented solutions for QR Payments in Indonesia, Bill Payment, Fast Payments, PSD2 based use cases for purchases, cash withdrawals and deposit via non-atm channels, distributed funds transfer, loans, BNPL at SCVentures neXus.
- I have experience of Tech Lead in JPMorgan to design and develop operations Desktop which automated different types of workflows for more than 5 million users. At JPMorgan also worked back securities core processing platform for investment banking user base with 50 million transactions per day.
- Solid background in solution architecture and design and Development of software platforms and Strong coding, analytical and problem solving skills
- Certified SCRUM master and expert Agile developer in agile methodologies and SCRUM
- Experience in design, development and deployment of applications to Kubernetes, AWS EKS clusters

Skill Summary

- **Engineering Leadership Skills**

- ◆ Hands on developer and leading team of 3 developers at Julius Baer.
- ◆ Experience of leading, guiding and coaching a team of more than 10 people.
- ◆ Experience in working with POs, stakeholders for requirement refinements, product backlog creation, story writing and refining
- ◆ Experience in working with CTO, Architects to drive overall design and architecture for the platform.
- ◆ Experience in handling for two squads payment and Debit cards at Banking-as-a-service platform. Also lead digital onboarding platform at SCB. And a tech Lead at JPMorgan.
- ◆ Experience in building teams from the ground up including interviews, onboarding, coaching to full-fledged squads in onsite as well as offsite locations

- **Technologies** : Java 21, Spring Boot 4, Hibernate, JPA, KONG API Gateway, Keycloak, IAM, Solace, Kafka, Spring Cloud, Eureka, Netflix Zuul,, Jenkins, Cucumber, Gatling, Spock, Akka, MQ, Design Patterns, Oracle, PostgreSQL, python, Charles River

- **Agile Methodologies** - SCRUM, Kanban, TDD, ATDD, BDD, Continuous Integration, Pair Programming

- **Cloud Technologies** : Kubernetes, Openshift, AWS EKS, Terraform

Professional Experience

DIRECTOR - JAVA DEVELOPER, JULIUS BAER, SINGAPORE – NOV 2024 - TILL NOW

Facade - part of Markets-As-A-Service framework, provides standardised global cross asset outbound interfaces via avro for markets across private banking platforms. Daily activities include hands-on java development in agile environments, working product owners and stakeholders within the bank. Facade is Greenfield platform initiated to build data feeds for the markets data generated from trading, execution, sales,

advisory platforms of the bank. Downstreams of data feeds from facade includes data analytics platform, regular reporting systems, accounting systems, global data platforms. Completely build from scratch in java, spring-boot, kafka, includes batch microservices for files processing and streaming microservices for near-realtime events processing.

ENGINEERING MANAGER, STANDARD CHARTERED BANK, SINGAPORE – APR 2019 - AUG 2023

I have been active in leading different teams of **Banking-As-A-Service** platform, called nexus in standard Chartered Bank.

Payments(neXus-Pay) platform, designed and developed payments platform **neXus-Pay** for SCVentures neXus customers in Indonesia. Designed and delivered payment features like QR Payments, FAST payments, Bill payments, fund-transfers, cash-withdrawals and deposits via non-atm channels. It also integrates with payment gateways in order to perform high value interbank funds transfers. Design and implemented advanced payment functions based on PSD2 framework like staged payments. It is also responsible for disbursement and repayments of BNPL, loans in on neXus.

Debit Cards Management Platform, designed and developed debit card management platform for neXus customers. It can issue, activate, block-unblock and replace cards in accordance with PCI-DSS regulations. It also supports functions to transmit card number, CVV2, card pin in secure fashion. Cards issued via nexus can perform 3DS, POS, MIT, CIT transactions from CASA issued to the customer.

Digital Onboarding Platform, designed and developed to onboard users to neXus platform in less than 3 minutes, with no-paper-work but just mobile-phone and national-id. Onboarding platform leveraged GPU based cloud services to scan national-ids, perform liveness and image compare services to perform KYC for the customer. It also integrated bank's screening and country based screening platforms to cross-check validity on the data related to employment, income-tax, PEP etc. Onboarding platform integrate with Credit Bureau in the country to validate eligibility of credit ratings for customers on neXus.

TECH LEAD, JPMORGAN CHASE BANK, SINGAPORE – APR 2012 - MARCH 2019

OTM, Operation Task Manager or also know client service desktop, is JPMorgan's cross business product for managing business operational exceptions, issues. With a volume

25 million operational cases involving complex workflow steps are handled by OTM. Currently interfaced via UI, messaging, email and has potential to onboard cases via chat bots. With a bluefield micro services architecture in place, OTM makes it to the one of the top 10 high tech products within JPMorgan. I am part of engineering team responsible for development of micro services to make platform more scalable, robust and extensible. OTM uses technologies like eureka, netflix zuul, spring boot, hystrix, elasticsearch, gemfire etc.

SCPP, Securities Core Processing Platform, is a strategic program run by JPMorgan to stream- line middle and back office platforms. SCPP contains many components responsible for asset servicing and recording, asset movement functions of millions of trades in equity, fixed income, custody core processing. I have been responsible for build EOD services like market valuation, contractual and auto Settlement, EOD state management of different regions like US, EMEA, APAC. I also worked on settlement and clearing of custody transaction for countries like Singapore, HongKong etc. I also got a chance to generate LRI reports for federal government. Recently designed and developed write-behind persistence API for SCPP custody platform with Gemfire Cache. SCPP is one of largest platform within J P Morgan and consists of more than twelve components. It uses various latest technologies like Spring, Core Java, Oracle Exadata, Apache Qpid, FitNesse, Jenkins, YourKit, Akka. And I got a chance to work on many end-to-end features with- in SCPP.

ASSOCIATE, BARCLAYS BANK, SINGAPORE – APR 2011 TO APR 2012

DEE - Deliver Execution Excellence is the Barclays Wealth's back office data staging and batch platform. It interfaces different trading platforms and Barclays trading systems, backbends and importantly it has been built around Charles River IMS product. It uses technologies like Java, Python, Informatica, Charles River Investment management System, Shell Scripts.

JAVA CONSULTANT, SONY, SINGAPORE – MAY 2009-APR 2011

HOME Project at Sony consists of web based components to market their products online e.g. www.sony.com.sg. Websites usually display sales company's products and their support contents. Product Information is maintained in Sony's legacy system called SPIDER which flows in the form of XML via REST web services.

I integrated Google Maps API to locate Sony's Dealers and service centers. Web analytics tool, Omniture has been integrated to Cache the contents, Homepage also has internal enterprise caches such as jboss and ehcache. Google Search Appliance

also plays role in making web pages search engine friendly and supports internal search on the website as well as external search on search engine. E-commerce Platform has been developed in order to provide e-commerce services based on SOA based platform called momentum, which has been hosted in JBOSS server.

JAVA DEVELOPER, DEUTSCHE BANK (HCL), SINGAPORE – JAN 2007-MAY 2009

EBICS is multi banking standard used in Europe and stands for "Electronic Banking Internet Communication Standard". This System consists of EBICS server and web base client application.

EBICS Server handles payments from multiple banks captured through EBICS standard based client application. EBICS Server has a capability to process German Payments like DTAUS, DTAZV, and SEPA. Server acts as a payment gateway for the payments which cannot be processed and hence accepts payment request from EBICS clients and routes them to different Deutsche bank's internal payment processing systems located in diverse regions like EU, US, Asia. EBICS server uses technologies like Core Java, MQ, JMS, XML, sftp etc.

EBICS Client is Cash Management application developed to communicate with EBICS Server. It provides GUI to capture payments and send them to Server. Payment files also can be up-loaded. Epics Client also poses capability to authenticate and authorise payments and then generates messages like DTAUS, DTAZV, and SEPA to send them to Server for further processing. EBICS client uses technologies like Spring, iBatis, XML, XSLT, Ant, Eclipse RCP

JAVA DEVELOPER, DEUTSCHE BANK SOFTWARE LTD, BANGALORE– JUL 2005-JAN 2007

DBDI (Deutsche Bank Direct Internet) is Global Cash Management enterprise application by Deutsche Bank which caters to US, Europe, Asia regions. The features of this application include functions to capture or upload payments messages, maintain and authorise payments, file Import-Export functionality, automatic file transfer module (AFTM) and Data junction mapping tool. The application also uses ERP formats like idoc, dtaus, and dtazv etc. DBDI uses several technologies like Struts, JSP, Deutsch bank's framework NextGen, EJB, JavaScript, iBatis, JRF, DAO. Weblogic Server, DB's Topgear batch server.

Education

University of Pune, India – Bachelor of Engineering, Computer Science and Engineering, 2005

Certifications

- Certified SCRUM Master from [scrums.org](https://www.scrums.org) - 2013

Personal Information

Singapore PR - Male, born on 8th Oct 1983
